Our concept

We aim to optimise your business opportunities, through automating processes and utilising resources more effectively. You can then focus on strategy and making informed business decisions sooner, giving you that all important competitive advantage.

Your business success depends on your IT infrastructure. You need our engineers team to deliver proactive services that not only keep your network up and running, but running effectively and efficiently.

Para Network LTD provide complete “managed services” package means that you will see increased performance, security, and reliability – immediately, and at an affordable price.

In these times of doing “more with less”, how can your business survive without Working Smarter, Not Harder!

PC Repair & Setup

Para Network LTD provide a PC Repair & Setup service. We will diagnose the all kind of issue with your Pc and related equipment, inform you of repairs needed, costs and will repair equipment with fee agreed up front. We also cover PC and Peripheral setup. Whether it be a new PC setup, connecting your PC to a TV or even installing a Printer.

Our network engineers will develop the environment according to your business and also we will build new environment and deploy it. Our expert engineers will monitor and manage new and existing environment. Para network LTD is doing additional services like manage and monitor Backup systems, E-Mail and server services.

Para network LTD is doing additional services like manage and monitor Backup systems, E-Mail and server services.

1. Quick response

Our team can monitor what issues are affecting your network, and will respond before they become critical – such as a server running low on memory
Automatic alert dispatch to your IT service provider guarantees a quick response to problems at your site.

2. Security monitoring

Alerts your IT service provider on attempted network access by unauthorized users software content control allows you to ban high-bandwidth interactive games or illegal peer-to-peer file sharing which monopolize business resources and promote viruses and Spyware Extensive security reporting gives you a bird's-eye view of your entire network's security Patch inventory ensures your operating systems are up to date and not exposed to vulnerabilities.

3. Remote Management and Communication

Our team can minimize disruptions to the work environment by remotely resolving issues using a secure VPN system if an issue arises that requires on-site assistance, prior in-depth knowledge allows us to send fully prepared specialists who can resolve the issue faster than ever before network services monitoring and alerting (POP3, HTTP, FTP and others) very low bandwidth requirements – does not slow down your network response time what issues are

affecting your network, and will respond before they become critical – such as a server running low on memory.

4. Detailed Site Level Inventory

Up-to-date hardware, software and patch information - automatically collected, 100% accurate.

5. Remote desktop

Remote Backup is the latest in a family of software and services that founded and defined the Remote Backup industry for microcomputers in 1987. It automatically backs up your critical computer files to a secure, off-site location, giving you the confidence and security big companies have enjoyed for decades.

Remote Backup runs on all 32-bit Windows operating systems including Windows 95, 98, NT, 2000, 2003, ME and XP. It runs in the background, and will not interfere with other programs you run. Through remote backup's simple and intuitive user interface, you can control which of your files are backed up, and on what schedule.

Remote Backup operates by defining Backup Sets, which are sets of files and a schedule for backing up those files. You can add new Backup Sets, Delete, Copy, and Save them. Backup Sets are automatically executed by Remote Backup according to their schedules.

6. Broadband
